HSP Objectives

- Describe current challenges and financing of health care and potential future solutions;
- Recognize important roles of the physician, the patient, and the family in health care and addressing health care challenges;
- Participate in a QI project of an ongoing team within the Dartmouth community;
- Recognize and appreciate the unique perspectives brought by different health professionals in discussing topics including innovation, health care finance, policy and ethics.
- Explain and apply basic QI principles and tools;
- Recognize, identify, and collect outcomes data and other data as appropriate to the QI project;
- Demonstrate team skills by participating in and contributing to team discussions and to the small group QI project and presentation;
- Use self-reflection and peer review group process in teams.
