Year II: CT/MS Additional Course Objectives

Three additional course objectives need to be added so that all sessions and evaluation tools have a course objective that they can map to:

"Describe how chronic pain differs from acute pain especially in effective treatment modalities."

"Explain the concept of central sensitization in pain perception and how this process is common in both fibromyalgia as well as other conditions that co-exist with it."

"Articulate a framework for approaching musculoskeletal complaints that incorporates inflammatory vs non-inflammatory and the pattern of joint involvement"

We'll want the MEC to approve these three additional objectives, in addition to the ones just approved in January.
