

D-H AlertUs – Windows installation

1. Go to (or stay on)

https://geiselmed.dartmouth.edu/oit/support/emergency-notifications/dh_alertus

2. Look for and click on the link labelled 'Windows files to install D-H Alertus'.
(Note: Clicking this link will download a zip file that contains the 3 files needed to install the windows version of D-H's Alertus software and configuration.)

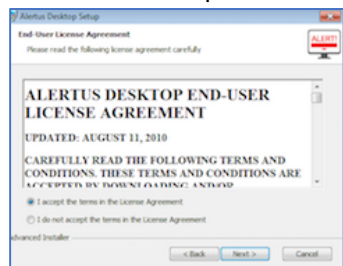

3. Unzip the zip file. You should be able to see the following three files:

- alertus-desktopalert_DotNet4.5_v4.1.4.1
- AlertusDesktopAlert.exe
- logo1.gif

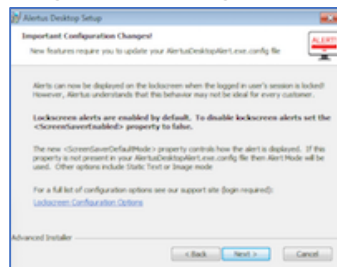

4. Double click on alertus-desktopalert_DotNet4.5_v4.1.4.1 to open the Alertus Desktop Setup window. Click the 'Next' button to continue.

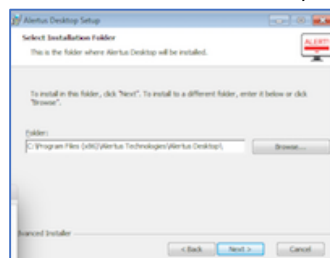

5. On the next screen click on the 'Accept' radio button, then click the 'Next' button to continue

6. On the 'Important Configuration Changes' window, click the 'Next' button.

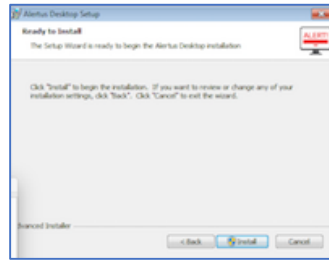

7. On the 'Selection Installation Folder' window, click the 'Next' button

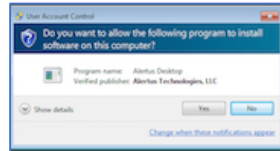

8. On the 'Ready to Install' window, click the 'Install' button. The software will now be installed.

D-H AlertUs – Windows installation

9. You may be asked if you want the program to be installed. If so, click the 'Yes' button to proceed.

10. If the software is installed successfully, you will see this message.

11. To complete the installation and start-up the Alertus program: Leave the 'Launch Alertus Desktop' checkbox checked and click the 'Finish' button to complete the process.

Once the program is running, an Alertus icon will show in your taskbar. If the software cannot make a connection to the server, the icon will be red.
